Customer Case Study – Controlled Power Technologies Ltd

The CEO of Controlled Power Technologies approached Commercial Utility Brokers (UK) Ltd at the start of 2008, after having worked with CUB when at his previous company. As a new business it was vital that Controlled Power Technologies partnered with a company who could source a new energy deal quickly and professionally.

Commercial Utility Brokers (UK) Ltd sourced a competitive gas and electricity contract and managed to push the supplier changeover through in 24hrs to tie in with the previous tenant's contract end date, so they did not incur any out of contract charges.

Controlled Power Technologies work with the motor industry on the reduction of carbon emissions and the information and monthly consumption report that CUB provide helps them to ensure that their own carbon footprint is minimised by highlighting any areas for improvement or concern.

Commercial Utility Brokers (UK) Ltd are now monitoring prices on a daily basis for Controlled Power Technologies' next contract renewal with a view to striking an early deal to take advantage of a possible fall in the market.

As a growing company Controlled Power Technologies are pleased to be working with Commercial Utility Brokers (UK) Ltd as we have a trusted provider for sourcing utility deals for new sites and supplies which will assist us with our future plans.
